DAVIS GLADS

For 1952

Davis Gardens

W. V. Davis.

Zelia E. Davis.

State Route 64. Kings, Illinois.

In presenting this Catalogue we wish to take this opportunity to thank our many customers of the past for their orders, also those of you who gave us orders last summer at blooming time.

We also wish to invite every one of you to come and see our gardens in bloom this summer.

We have tried to describe the glads in our Catalogue as though we were talking to you in our gardens. We hope we have described them so you can see them as we do.

We have quite a few varieties not listed as we have a limited amount of them. If there are some varieties that you wish that we haven't listed, please write us.

We are located in Kings, Illinois, on State Highway 64—22 miles south of Rockford and 80 miles west of Chicago and 11 miles east of Oregon, Illinois.

Notice

We have recently purchased the entire bulb stock and equipment of Waukarusa Gardens owned by Mr. C. S. De Nier at Mt. Carroll, Illinois. His health does not permit him to go on with his gladiolus business. We are listing several varieties he has been growing that we have not tried, but we know they are good or he would have thrown them in the creek. Along with the bulb stock there are a great many seedlings, so with these and several thousand of our own hybridising efforts we should be able to select some to name and introduce before too long.

Mixed Bulbs

Here is your chance to save plenty! If you are one of those gardeners who love flowers but do not care to grow each variety separately, by name, you can get tremendous value in these mixtures. Bulbs are first quality and are hand mixed to give splendid color combinations. If you want lots for little money, the small bulbs offered will bloom this year. Blooms will be a little smaller but you will have a fine crop of large bulbs for next year. Look for them listed alphabetically in the wholesale price list.

Terms

Terms—Cash with order—or remit 25% with order and balance may be remitted before shipping date—or we will send COD for the balance if you prefer. Minimum order that we can accept is \$2.50.

All bulbs have been state inspected and dusted with 5% DDT powder to insure them of being thrip free at planting time, however, as thrip fly your plants should be dusted with DDT throughout the summer. With each order we will include a pamphlet on gladiola growing storage, and pest control.

If your order is found to be unsatisfactory you may return it at once and we will refund your purchase price.

We will send only healthy bulbs, true to named varieties. We do not guarantee the growth of the bulbs due to many cultural methods and climatic conditions.

Unless otherwise requested orders will be acknowledged on receipt and shipment made after danger of freezing is over.

Gladiolus Cultural Directions

A plot which will produce good vegetables will produce good gladiolus spikes. Select a planting plot as far from trees or buildings as possible. Tree roots rob the ground of moisture and buildings reflect heat.

PREPARE YOUR GLAD BED WELL. Plant bulbs 5 to 6 inches deep. Space them 6 inches apart in the row.

Since all people do not kill thrip at planting time, there is danger of getting thrip from other gardens because thrip can fly and are also carried by the wind, so when your glads are about 6 inches high start spraying or dusting to prevent thrip injury.

Make a spray solution by dissolving 1 ounce of 50% wettable DDT in 3 gallons of water. If you prefer dusting use 5% DDT in a small dust gun. **SPRAY OR DUST EVERY 10 DAYS** up to blooming time. All sprays and dust are poison.

Glads are primarily cutflowers. Cut the spike when the first flower opens and develop them indoors. They will open in water, and you can enjoy them indoors a long time. When cutting the spikes leave at least 4 leaves on the plant to develop the bulb for next year.

October is the usual bulb digging month. Lift the bulbs with a spade. Cut the stem off close to the bulb. Dry them in shallow boxes or trays until dry enough to remove the old bulb and roots, then dust the cleaned bulbs with 5% DDT and store in cloth bags, screen bottom trays or shallow boxes in coolest place you have but they dare not freeze.

DDT Powder

We have 5% DDT Powder:

Postpaid with or without bulb order.

Prices Subject to Market Changes.

All stock offered subject to prior sale. Where bulb-lets are listed by the "packet" there will be 50 to 100 bulblets or more in package. Five bulbs will be sold at one-half the price per ten.

Bulb Sizes

Glad bulbs are graded into six sizes: No. 1 bulbs are 1½ inch or larger in diameter. No. 2 is 1¼ to 1½ inch in size. No. 3 is 1-inch to 1¼ inch. No. 4 is three quarter inch up to 1 inch. No. 5 and 6 are one-quarter inch smaller with No. 6 being a half inch bulb, and considered the smallest size sold commercially. "Large" bulbs are considered No. 1 and No. 2. Mediums are No. 3 and No. 4 mixed. Small bulbs are Nos. 5 and 6. Most varieties will produce a very good bloom from medium bulbs, and Nos. 5 and 6 will usually bloom altho quite late in the season. Many varieties will supply a fair bloom from well grown bulblets.

The Gladiolus Classification System

The number after the name of each variety in our general descriptive list denotes the official size and color classification of that variety as determined by a committee of the North American Gladiolus Council. We list these classification numbers because they are helpful to customers in determining the exact size and color classification of varieties they may want to buy or to exhibit at glad shows conducted under the auspices of the N.A.G.C., where this classification system is used.

Glad's are classified in five sizes as follows:

| | |
|----------------------|-----------------------|
| Miniature Glads..... | 100—florets under 2½" |
| Small Glads..... | 200—2½" through 3¼" |
| Medium Glads..... | 300—3¼" through 4¾" |
| Large Glads..... | 400—4½" through 5¾" |
| Giant Glads..... | 500—5½" or larger |

For instance, take Algonquins. The first variety described, Algonquin, is followed by the number 536. The 500 means it has a floret size of 5½" and larger. The 36 designates this variety as a scarlet. Hence the numbers after the variety names tell the story of the size and color of the individual floret as grown under field conditions from large bulbs.
